

During my tenure in infection prevention, I have dealt with many vendors and products for hand hygiene. We needed to change products at our institution and after an open trial of several products, our employees chose Symmetry™. It was the easiest transition I have ever experienced. The company's staff was cordial, knowledgeable, and in a matter of days replaced our old product with the new one, added many more as soon as we asked them to, and even used the proper PPE to enter precaution rooms, without being prompted. The foam works well, and our hand sanitizer usage rates increased almost immediately.
