Hello, my name is GERMIE. Let’s play CATCH!

Don’t make friends with GERMS! WASH YOUR HANDS.

Wash your hands with Symmetry™ soap and eliminate germs. Hands

Handwashing is the single most important step in stopping the spread of germs.

What is MRSA?
MRSA, Methicillin-Resistant Staphylococcus Aureus, is a mutation of a staph infection, a bacterial infection that can be dangerous if not treated promptly.

How is it transmitted?
MRSA is transmitted from skin to skin contact through cuts and scrapes, and also through contact in restrooms.

How to prevent MRSA?
Handwashing is the single most important step in stopping the spread of MRSA.
